Question 5:

Define Favicon and give an illustrative example.

Answer:

A favicon, short for "favorite icon," is a small image displayed next to the page title in a web browser tab. **Favicon** (short for "favorite icon") is a small icon associated with a website, typically displayed in the browser's address bar, tab, or bookmark list. It helps users easily identify and recognize a website.

Creating a favicon can be done in several ways, depending on whether you already have an image or logo, or if you're starting from scratch. Here are some methods:

• **Using an Existing Image**: If you have a pre-existing image or logo, you can convert it into a favicon format using tools like the Favicon Generator. This tool allows you to upload your image and convert

it into the appropriate format for use as a favicon.

- **Generating from Text**: In cases where you don't have an image, you can use text-based tools to generate a favicon. These tools allow you to input text, which is then converted into a simple, high-contrast image suitable for use as a favicon.
- **Using Emojis**: For a more playful or modern approach, you can choose from hundreds of emojis to create your favicon. This can be done through favicon generation tools that offer a selection of emojis to use as your website's favicon.

Example:

To include a favicon in an HTML document, you can use the following code in the <head> section:

<link rel="icon" href="favicon.ico" type="image/x-icon">
