Question 1

1. List out the features of HTML5?

Answer :

HMTL contributes to build a web page in numerous way and it's attributes and features make it more usable and easy to code.

Here is some features of HTML5:

- **New Semantic Elements**: Introduces elements like `<header>`, `<footer>`, `<article>`, and `<section>` for better structure.
- **Multimedia Support**: Native support for audio and video with `<audio>` and `<video>` tags.
- **Canvas Element**: Allows for dynamic, scriptable rendering of 2D shapes and bitmap images using the `<canvas>` element.
- **Improved Forms**: New input types (e.g., `email`, `date`, `range`) and attributes (e.g., `placeholder`, `required`) enhance form functionality.
- **Local Storage**: Provides a way to store data on the client side using `localStorage` and `sessionStorage`.
